- ✚ **2022:** Bachelor of Computer Application from Maharishi Mahesh Yogi Vedic Vishwavidyalaya, Jabalpur with 74%

PROJECTS

Lyvup: At Lyvup, we believe that accessible and affordable healthcare is crucial for a healthy society. Our mission is to provide innovative digital therapies that seamlessly align with the needs of individuals of all ages, socioeconomic statuses, languages, or digital skills.

Accessibility is a top priority for us. With our digital therapy, patients can receive the care they need from the comfort of their own homes, eliminating the need for frequent visits to their healthcare providers. This convenience enhances the healthcare experience and promotes treatment adherence

Ordant: Our Next-Gen Cloud Based platform runs your entire print business from start to finish. No more juggling between multiple software and retyping the same information.

Ordant's powerful, customizable modules work independently but integrate seamlessly. Used together, the modules replace the disconnected silos of data created when you have multiple business and marketing software subscriptions. Whether your business adds locations, production technologies, or services, Ordant can help you adapt and scale up.

POS System: A point-of-sale (POS) system is the hardware and software that helps your business accept payments from customers and make sales in person. It also routes funds to your bank account after each sale.

A POS system, or point-of-sale system, is a combination of hardware, software and payment services that businesses use to make sales. And as its name implies, this system exists at the physical or virtual point of sale. Online-only businesses, however, do not require hardware to complete their POS systems.

Park Smart: A parked domain is any domain name that is not linked to any unique website or web service. Parked domains may not be linked to any page, or they could serve as an alias for

another, primary domain. An add-on domain, on the other hand, is meant for showing a completely separate website from other domains.

A certification program that defines, measures, and recognizes high-performing, sustainable garages. It was developed by industry experts and is administered by Green Business Certification, Inc (GBCI). The program offers a roadmap for new and existing parking facilities to use innovative, solutions-oriented strategies. It complements LEED and other certifications.

Cough Drop: Some people are hard to hear -- through no fault of their own. Disabilities like autism, cerebral palsy, Down syndrome, Angelman syndrome and Rett syndrome make it harder for many individuals to communicate on their own. Powerful software called Augmentative and Alternative Communication (AAC) can fill the gaps and make every voice heard.

At Cough Drop we work to help bring out the voices of those with complex communication needs through powerful open-source technology that easily adapts to the individual and supports everyone around them trying to help them succeed.
